

Reduce manual, repetitive tasks, and remove fragmented communication across departments, trusts, or healthcare providers.

Configure to your requirements

Model complex and extensive,
event-driven workflows and clinical
pathways needed in healthcare settings.

Automated and manual tasks can be built into workflows to maximise efficiency and safety.

Integrate with other systems used across healthcare using standard protocols.

Packed with best in class features

Workflow designer

- Provides a combination of manual (human) tasks and automated tasks like sending notifications.
- Allows integration with other AireSuite products like AireGlu (integration engine) for automation.

Low code configuration

- Offers a low code approach enabling rapid application deployment by separating workflow changes from release cycles.
- Provides a powerful expression language for value selection, boolean expressions and Liquid for templating and mapping.

Choreography-Based Approach

- Adopts a choreographed approach where each workflow section is triggered by an event or a change in status of another task.
- Reduces organisational and cognitive overhead by allowing teams to focus only on their responsible.
- Enables loosely-coupled integration of workflows across discrete.

Extensible tasks

- Provides a combination of manual (human) tasks and automated tasks like sending notifications or calling an API.
- Allows integration with other AireSuite products like AireGlu (integration engine) for automation.

Event-driven architecture

- Reacts to a stream of events that drive the workflow behaviour.
- Maintains a historical record of all activity for insights into caseload management and bottleneck analysis.

Security

- We follow globally recognised best practices for information security management and are ISO 27001 certified.
- Data is hosted on premise or in AWS eu-west-2 (London) data centres which are also compliant with ISO 27001.
- Robust configuration management including versioned workflows and automated testing supports well managed iterative delivery.

Security built in

Our platform is designed to robustly meet GDPR, DCB0129 and EU GMP. We follow globally recognised best practices for information security management and are ISO 27001 certified. Data is hosted on premise or in UK data centres which are also compliant with ISO 27001.
